

MEMORANDUM

To : See Distribution List below

From : J.P. Delahaye, PS Division Leader

Subject : B-train in the PS Complex

As decided at the PS Management Board Meeting on 6th November 2000, I have asked M. Benedikt to make a survey on the present status of the different B-train systems used by the accelerators in the PS Complex (PS, PSB, and AD). His task is to summarise the existing structure of the systems and the user requests and to present his recommendations to the PSMB by the end of the 2001 shutdown.

His mandate consists of:

- a) Reporting the technical status of all B-train systems currently used (i.e. measured and synthetic B-trains). Limitations of the different systems as well as questions of maintenance should be addressed.
- b) Summarising the user requests. The needs of the specific users should be clearly identified and recommendations for improvement possibilities should be given.

This study will enable us to decide how to improve the B-train systems in the PS Complex and respond to future requirements. I would like to ask you to give M. Benedikt full details and your support for this study. I also encourage you to use this opportunity to make known any of your ideas or comments for the future evolution of the system.
